

## Linux Configuration for Management and Deployment

The following are required on new Linux Operating System installation before you can deploy the SyAM Client and use SyAM Management Utilities to perform Third Party Application deployment to Linux targets

	<b>Ubuntu 14/15 64bit</b>	<b>Fedora 19/23</b>
Pre Requisites for Client Deployment	sudo apt-get install libz1:i386 sudo apt-get install zlib1g:i386  sudo apt-get install xfce4-session sudo apt-get install libjpeg62:i386	sudo yum -y install glibc.i686 yum -y install libgcc_s.so.1
Pre Requisites for Third Party application Deployment	sudo apt-get install openssh-server sudo apt-get install smbclient sudo apt-get install yum	Yum install openssh-server
Firewall (Must be open for deployment so we disable)	sudo ufw disable	systemctl stop firewalld systemctl disable firewalld

To Install the Linux Client run the command Sudo ./install.sh
